Ultimate Oscillator Drops Below 40 on Shares of MSM MALAYSIA HOLDINGS BERHAD (5202.KL)

Posted by Scott Martin on February 20, 2019 at 10:12 am

Following the Ultimate Oscillator reading for MSM MALAYSIA HOLDINGS BERHAD (5202.KL), we have recorded that the Ultimate Oscillator is presently below the 40 mark. Traders may be tracking the UO reading to figure out if the stock has entered oversold area.

Many investors enter the stock market without a plan in place. Investment goals may be a highly important part of coming out on top. Investors may need to set realistic and measureable goals in order to build a baseline for success. Defining investment goals clearly can help keep individual investors from making common mistakes and losing their shirts. Creating a plan for entering the equity market may start by setting up goals and outlining the objectives of the individual. These goals can differ depending on the person and situation. Many investors will opt to follow strategies put in place by others. This may work fine for some, but not as well for others. Keeping a close eye on particular stocks in the portfolio may help the investor when the time comes to adjust the holdings. Being able to adapt to rapidly changing market environments may turn out to be immensely important when the winds of uncertainty blow in.

At the time of writing, MSM MALAYSIA HOLDINGS BERHAD (5202.KL) has a 14-day Commodity Channel Index (CCI) of 71.84. Developed by Donald Lambert, the CCI is a versatile tool that may be used to help spot an emerging trend or provide warning of extreme conditions. CCI generally measures the current price relative to the average price level over a specific time period. CCI is relatively high when prices are much higher than average, and relatively low when prices are much lower than the average.

Shares of MSM MALAYSIA HOLDINGS BERHAD (5202.KL) currently have a 14-day ADX of 25.83. The ADX was developed by J. Welles Wilder to help determine trend strength. Generally speaking, a rising ADX line means that an existing trend is gaining strength. The opposite would be the case for a falling ADX line. Many chart analysts believe that an ADX reading over 25 would suggest a strong trend. A reading under 20 would suggest no trend, and a reading from 20-25 would suggest that there is no clear trend signal.

Narrowing in on moving averages for MSM MALAYSIA HOLDINGS BERHAD (5202.KL), the 200-day is at 3.42, the 50-day is 2.54, and the 7-day is resting at 2.39. Moving average indicators are popular tools for stock analysis. Many traders will use a combination of moving averages with different time frames to help review stock trend direction. One of the more popular combinations is to use the 50-day and 200-day moving averages. Investors may use the 200-day MA to help smooth out the data and get a clearer long-term picture. They may look to the 50-day or 20-day to get a better grasp of what is going on with the stock in the near-term.

Interested investors may be watching the Williams Percent Range or Williams %R. Williams %R is a popular technical indicator created by Larry Williams to help identify overbought and oversold situations. Investors will commonly use Williams %R in conjunction with other trend indicators to help spot possible stock turning points. MSM MALAYSIA HOLDINGS BERHAD (5202.KL)'s Williams Percent Range or 14 day Williams %R currently sits at -28.57. In general, if the indicator goes above -20, the stock may be considered overbought. Alternately, if the indicator goes below -80, this may point to the stock being oversold.

The Relative Strength Index (RSI) is a momentum oscillator that measures the speed and change of stock price movements. The RSI was developed by J. Welles Wilder, and it oscillates between 0 and 100. Generally, the RSI is considered to be oversold when it falls below 30 and overbought when it heads above 70. RSI can be used to detect general trends as well as finding divergences and failure swings. The 14-day RSI is presently standing at 50.48, the 7-day is 60.92, and the 3-day is resting at 67.38.

Investing in the stock market may include having to keep emotions in check. When things get crazy, investors may be forced with tough decisions. Being able to stay away from impulsive decisions may help when the time comes to tweak the portfolio. Having the proper discipline and market perspective may also be a highly desirable trait for a successful trader. Investors who are able to practice discipline may be able to avoid emotional trading pitfalls in the future. Even highly experienced investors may have to someday make the difficult decisions in order to keep the portfolio strong. Figuring out what works and what doesn't may take many years of trial and error. Learning to filter through the daily noise can be a big asset when trying to focus on the particularly important information.
